Objective

Microsoft Dynamics 365 Techno-Functional Consultant & ERP Analyst with 8 months of hands-on experience in implementing, optimizing, and supporting enterprise systems. Skilled in bridging business needs with scalable technical solutions through Power Platform, API integration, SQL, and core ERP modules. Experienced in functional analysis, custom workflow automation, and cross-team collaboration. Committed to driving digital transformation, process efficiency, and data-driven decision-making in modern enterprises.

Experience

ERP Analyst Engineer

Comline Corporate Solutions Pvt. Ltd. – Vadodara, Gujarat

Nov 2024 – Present

- Developed secure web applications using **C#, .NET, PHP, JavaScript**, and **SQL** to streamline business operations and enhance data accessibility through robust **API** integrations.
- Designed and implemented custom **Power Apps** and automated workflows using **Power Automate** to extend Microsoft Dynamics 365 functionality across departments.
- Integrated and optimized **Dynamics 365 Finance & Operations** modules, including **Warehouse Management, Sales, Procurement, Invoicing**, and **Purchasing**. Maintained and updated critical product lifecycle data, ensuring accurate configuration, pricing, and compliance with business needs.
- Oversaw full-cycle **Sales** and **Purchase Order** processes, ensuring order accuracy, timely fulfillment, and alignment with operational standards.
- Supported warehouse operations by managing stock movements, shipment **workflows**, order picking, and inventory reconciliation. Leveraged **Azure Data Lake, Azure Synapse**, and **Azure SQL Database** for data migration, reporting, and managing Entity Store pipelines.
- Provided responsive support via **helpdesk ticketing**, resolving user issues efficiently to minimize downtime and maintain productivity.
- Contributed to the successful **Go-Live of Dynamics 365** and led **post-deployment testing** and validation to ensure seamless performance and user adoption.

Education

- | | |
|---|------|
| • SB Jain Institute of Technology Management and Research, Nagpur, Maharashtra | 2024 |
| Bachelor of Technology (BTECH) – Electronics & Telecommunication- 8.91 CGPA | |
| • HSC Board, XII - 71.53% | 2020 |
| • SSC Board, X - 89.20% | 2018 |

Skills

- **Technical Skills:** Microsoft Dynamics 365 F&O Modules, Power Apps, Power Automate, Power Virtual Agents, Power BI, Power Query, API Testing, Logic Apps.
- **Programming Languages:** C, C++, C#, .NET, Python, Java, JavaScript, PHP, HTML, CSS.

- **Software Tools:** Postman, Postmark, Phocas, Git, Plesk, Microsoft Excel, SQL Server Management Studio (SSMS).
 - **Databases:** Microsoft SQL Server, MySQL, PostgreSQL, MongoDB.
 - **Soft Skills:** Team Collaboration, Communication, Analytical Thinking, Problem Solving, Adaptability.
-

Projects

- **Warranty Claims Dashboard and Management System**

Technologies: Microsoft Dynamics 365, PHP, SQL

- Designed and developed an interactive dashboard to analyze claim data, including defective parts and warranty claims, enabling data-driven insights and improved decision-making.
- Integrated Microsoft Dynamics 365 with a custom backend built in PHP and SQL to ensure real-time data synchronization and accuracy.
- Enabled cross-functional visibility into warranty issues, helping departments proactively address recurring product faults. Implemented filtering and drill-down features to support in-depth analysis by part number, category, and claim type.
- The system improved operational efficiency by automating manual reporting tasks and reducing the time taken to investigate warranty issues. Also contributed to improved customer satisfaction by enabling faster claim resolution through data-driven insights.

- **GRN Packaging Data Management System**

Technologies: PHP, SQL

- Developed a dynamic web-based system to manage and display Goods Receipt Note (GRN) packaging data across Primary, Secondary, and Tertiary sections. Each section is triggered individually to fetch and display relevant records using optimized SQL queries from a live database hosted on Plesk.
 - Designed the interface in PHP to allow seamless user interaction, efficient data filtering, and improved data accessibility.
 - The system supports key packaging attributes such as material type, packaging weight, and quarterly lifecycle data, enabling accurate inventory tracking and audit readiness. Enhanced operational workflows by providing centralized access to packaging information for procurement and warehouse teams.
