- Role: Data Analysis
- Description: The IOT Application is Used To Detect The Alcohol Consumption While Driving The Four Wheeler The Sensors Will Detect The Data.

AI Translating

- AI translating uses artificial intelligence to automatically convert text or speech from one language to another. It helps break language barriers quickly and accurately across websites, apps, and real-time conversations.

AI Text to Language

- AI Text to Language converts written text into natural-sounding speech using artificial intelligence. It enables lifelike voice output in multiple languages, making content more accessible and engaging.
