Technical Consultant (Transitioning from Frontend Engineering)

Frontend Engineer with 3.8 years of experience building scalable web applications in enterprise and product-based environments, currently transitioning into a Technical Consultant role. Experienced in understanding functional requirements, translating them into technical implementations, and collaborating with cross-functional teams to deliver user-centric solutions. Hands-on experience with Agile delivery, system integrations, stakeholder collaboration, and enterprise platforms such as Salesforce. Strong technical foundation combined with growing expertise in requirement analysis, solution thinking, and bridging business needs with engineering execution.

Work Experience

Cogniquest.ai

Senior UI Engineer • Full-time

01/2024 – 07/2025

Bengaluru, Karnataka

- Led development of the company's core frontend product, focusing on usability, scalability, and maintainable UI architecture.
- Worked closely with product managers and internal stakeholders to understand feature requirements and translate them into functional UI workflows.
- Implemented document interaction features including PDF and image rendering/highlighting using Canvas.js.
- Collaborated with backend teams on API integration, data handling, and secure frontend communication.
- Designed role-based dashboards and subscription-driven UI components aligned with business requirements.
- Supported feature validation through internal demos, feedback iterations, and Agile sprint cycles.
- Mentored a junior frontend developer and contributed to code reviews and implementation best practices.

HyperAffix

React JS Frontend Developer • Contractor

02/2023 – 07/2023

Bengaluru, Karnataka

- Developed a Homestay Management web application based on defined product and functional requirements.
- Translated business use cases into frontend workflows for property and guest management.
- Implemented authentication and data handling using Firebase Auth and Firestore.
- Coordinated with and guided a junior backend developer to align API responses and data structures with frontend requirements.
- Worked with stakeholders during feature testing and validation phases.

- Ensured frontend solutions met usability, performance, and data integrity expectations.

Accenture

05/2021 – 01/2023

Associate Software Engineer • Full-time

Bengaluru, Karnataka

- Worked on the Salesforce Trade Promotion Management (TPM) system in a client-facing enterprise environment.
- Designed and developed Salesforce pages, components, and dashboards to support business workflows and reporting needs.
- Implemented user roles, profiles, and access controls based on organizational hierarchy and business requirements.
- Created and enhanced application functionalities aligned with stakeholder requirements and system constraints.
- Performed functional and integration testing of Salesforce applications to ensure reliability and data accuracy.
- Analyzed and resolved user-reported issues, providing timely fixes and support to business users.
- Collaborated with cross-functional teams and participated in Agile ceremonies including sprint planning and reviews.

Consulting Experience Highlights

- Worked closely with product owners, business users, and internal stakeholders to understand functional requirements and clarify implementation expectations.
- Translated business and user requirements into technical solutions, including UI workflows, dashboards, and application functionalities.
- Contributed to enterprise application development by configuring user roles, access controls, and hierarchy-based permissions in Salesforce.
- Supported functional, integration, and user acceptance testing to ensure solutions met business and system requirements.
- Collaborated across frontend, backend, QA, and product teams to ensure aligned and timely delivery.
- Participated in Agile delivery cycles including sprint planning, demos, feedback incorporation, and release support.
- Assisted in resolving user-reported issues and queries by analyzing root causes and implementing appropriate fixes.
