ORGANIZATIONAL EXPERIENCE

Project:

Client	: William Demant Holding.
Team size	: 08.
Role	: Application Support Conslt/ implementation Conslt
Functional Area	: AR, AP, Inventory, Retail, Sales, Purchase, PIM,DIFX
Duration	: April 26, 2021 to till date.
Environment	: Dynamics AX 2012 R3, DevOps, Power BI,F&O

Description:

The Demant Group is a global market leader in hearing care. They develop manufacture and sell products and equipment that help people with hearing loss connect and communicate with the world around them. They focus on four business activities: Hearing Devices, Hearing Implants, Diagnostic Instruments and Personal Communication.

Roles:

AX 2012 R3 Implementation Roll out, D365 FO Upgrade & Stabilization (B2B & B2C - Manufacturing, Wholesale & Retail Sales of Configure-to-Order Healthcare devices)

Current Role:

- The client is on a unified AX ERP system to manage their business in many aspects such as Point-of-sale, Service, Wholesale Sales, tracking inventory, Manage payments and Integration to several other third-party software.
- Gather business requirements for implementing the existing template in many legal entities in Europe, Americas, and Asia Pacific regions.
- Analyse new requirements in customized areas such as Insurance claiming & Contracts management and leverage the functionality to fit the requirements.
- Roll out the existing template with minor modifications to Sales, Purchase, Service areas in the template.
- As part of the Stabilization model, coordinate with Support team and implementation team to capture issues in the solution and amend the solution design to improve the user experience.
- Update design in FDS documents as and when new Change requests are implemented for live countries.
- Liaise with developers during development phase and perform functional screening of important scenarios covered.
- Provide Hypercare support to Production after going live – Master data, Transaction data, Prints issues, Training users
- Periodically consult with the Support team & implementation team to analyse and monitor recurring issues using Problem methodology to identify underlying root causes.
- Periodically coordinate with Automation testing team to ensure regression testing is performed before each test drop.
- Oversee Junior Support resources, assist them for supporting different areas of Solution design and be accountable for delivery as per agreed Service levels.
- Train Users and Super users on common errors, workarounds, and solutions
- Worked in different modules like Account Receivables, Account Payables, and Inventory Management, Product information management, Retail, Sales, and Marketing.
- Hands-on experience in Retail store configuration, discount setup, and payment integration.

- Have knowledge on Data Migration & Integration Support

Current Role Responsibilities:

- Responsibilities include analysing the support requests and resolving within agreed timelines with utmost quality & efficiency.
- Regularly Coordinate with the onshore Stake holders to give the updates on current issues and problems that end users are facing.
- As few tickets contains technical errors, which are difficult to analyse for Functional consultant, I am learning to understand the code and start debugging the code to identify the root cause, and it might reduce the dependency on the Developers and turnaround time for the support tickets.
- Gradually, I am learning to write the AOT jobs to do the data corrections in AX to reduce manual efforts.
- Role involves identification of root cause and update the developer and provide work around to the business till the issue gets fixed.
- After the Fix is done, perform the system test before deploying to Production.
- Along with this worked as POC in Project Level for Role based Security, responsibilities include Setting Role based security for users, and help users to fix the Access errors.
