- Configure Security role to ensure compliance with health care regularizations and protecting of patient information
- Conducted user training sessions for hospital staff on the new system, including system navigation, data entry, and troubleshooting.
- Conducted rigorous testing and worked closely with hospital teams to ensure all modules were functioning as expected.
- Provided ongoing support for system optimization, troubleshooting, updates, and maintenance.

Project II Information

- **Role: Technical Consultant**
- **Technology Used:** Microsoft Dynamics 365, Power Platform (Power Apps, Power Automate)
- **Industry:** Insurance
- **Client: Leading Insurance Provider (APAC Region)**

Project Overview:

The Insurance Management system is a comprehensive solution designed to automate the operational processes, including policy management, customer interactions, premium calculations, and claims processing. Specifically, this system focuses on automating the business workflows and providing a structured, transparent claims approval process to enhance efficiency, reduce manual errors, and ensure timely claim resolutions.

Key Responsibilities:

- Design and build Power Automate flows and Canvas/Model-driven Power Apps to automate repetitive insurance operations like claim notifications, policy issuance, or follow-up reminders.
- Enable role-based security and access controls based on insurance hierarchy (agents, underwriters, claims adjusters, etc.) to ensure data confidentiality and compliance.
- Develop reports and dashboards within CRM or using Power BI to track key insurance KPIs like claim turnaround time, renewal rates, and agent performance.
- Conduct data migration and transformation activities, ensuring legacy insurance data (policies, claims history, customer profiles) is cleanly imported into Dynamics 365.
- Provide technical support and ongoing enhancements for CRM features related to insurance product changes, regulatory compliance updates, and user feedback.
- Collaborate with QA teams to define test cases and ensure successful UAT for CRM functionalities in the insurance domain.
