## TECHNICAL CONSULTANT

Business Central Technical Consultant with nearly 4 years of experience working across Sales, Rental (custom), Projects, Service, and Parts modules, including Advanced Warehousing and Warehouse Insight. Strong experience in AL development, customization, integrations, and deployment management across SIT, UAT, and Production environments. Worked in Agile environments using Azure DevOps, collaborating closely with functional consultants and business stakeholders. Supported North American clients, handling deployments, upgrades, integrations, and post-go-live technical support.

---

## SKILLS

**Technical Skills:** AL Programming Language | Business Central Extension Development | XMLPorts & Report Development | API & Web Service Integrations | Data Migration & Data Validation | Debugging & Troubleshooting | Performance Optimization | Customization & Event-Based Development

**Tools & Platforms:** Docker (Business Central Containers) | Azure DevOps (Repos, Pipelines, CI/CD for Business Central) | Visual Studio Code | Postman | SQL Server (Basic)

**Deployment & DevOps Capabilities:** Environment Setup (Docker, Sandbox) | Deployment Support (SIT, UAT, Production) | CI/CD Pipeline Management | Release Management

**Agile Capabilities:** Agile & Scrum | Code Reviews | Version Control | Defect Analysis & Resolution | Technical Documentation

---

## PROFESSIONAL EXPERIENCE

**Level Shift (formerly PreludeSys)**

October 2023 - Present

**Technical Consultant | Project: TMHNA (Toyota Material Handling North America)**

Worked as a Microsoft Dynamics 365 Business Central Technical Consultant, leading development, customization, integrations, and deployment activities across Sales (Rental), Operations, and Parts modules. Collaborated closely with Product Owners and Functional Architects to deliver scalable, high-quality technical solutions aligned with business requirements.

### Accomplishments:

- Lead the design and development of Business Central extensions using AL language, delivering custom functionalities across Rental, Operations, and Parts modules.
- Designed and implemented API integrations with external systems to support operational workflows and enterprise integrations.
- Played a key role in performance optimization, debugging, and troubleshooting, ensuring system stability and reduced production issues.
- Supported end-to-end deployment activities across SIT, UAT, and Production environments, ensuring smooth and reliable release cycles.
- Actively collaborated with functional consultants, Product Owners, and QA teams to translate functional requirements into effective technical solutions.
- Assisted with data migration, validation, and correction activities, ensuring accurate data loads and maintaining data integrity in UAT and Production.
- Provided post-go-live technical support, resolving production issues, delivering hotfixes, and supporting continuous improvements.
- Utilized Azure DevOps for source control, CI/CD pipelines, work item tracking, and sprint-based development in Agile environments.
- Stayed up to date with Business Central platform updates and best practices, continuously enhancing solution design and implementation quality.

**Project: TMHNA (Toyota Material Handling North America)**

Worked as a Junior Technical Consultant on Microsoft Dynamics 365 Business Central, supporting development, customization, testing, and deployment activities under the guidance of senior technical and functional consultants.

**Accomplishments:**

- Assisted in AL development and minor customizations, supporting extensions.
- Supported senior technical consultants in analyzing functional designs and translating requirements into technical solutions.
- Developed and modified reports, XMLPorts, and basic integrations, ensuring alignment with business requirements.
- Performed unit testing and functional validation of custom developments prior to QA handover, helping reduce defects identified during QA cycles.
- Actively participated in debugging, issue analysis, and troubleshooting, assisting in faster resolution of development and testing issues.
- Supported data validation and migration activities, ensuring accuracy of uploaded data across environments.
- Assisted with deployment activities in SIT and UAT environments, including extension publishing and validation.
- Collaborated closely with functional consultants, QA teams, and developers, gaining hands-on exposure to end-to-end Business Central implementation processes.
