Software Engineer with 3+ years of experience in ERP development and full-stack web applications, specializing in Microsoft Dynamics 365 Business Central. Adept at AL extension development, system integration, and performance optimization. Demonstrated success in delivering scalable solutions across finance, inventory, and sales modules. Committed to driving digital transformation through automation, cloud technologies, and modern development practices.

PROFESSIONAL EXPERIENCE

Technical Consultant | Anantara Solutions, Chennai(Remote)

Dec 2025 – Present

- Migrated on-premises to SaaS Business Central, ensuring smooth transition with minimal disruption.
- Converted legacy CAL code to AL, modernizing extensions for cloud compatibility.
- Executed data migration with validation and reconciliation to maintain accuracy.
- Built and deployed API integrations between CRM, Business Central, and third-party systems.

Associate Technical Consultant | ABS, Bengaluru

Feb 2024 – Sept 2025

- Executed end-to-end migration from Microsoft Dynamics NAV to Business Central, including schema mapping, data transformation, and validation using SQL and configuration packages.
- Developed RDLC reports for financial statements, inventory tracking, sales, purchases and audit logs, optimizing layout and query performance for faster rendering.
- Implemented RESTful integrations using OData and custom APIs to connect Business Central with external.
- Delivered post-deployment technical support, conducted user training sessions, and resolved AL runtime issues to ensure stable production rollout.
- Engineered AL-based extensions to automate journal entries, ledger postings, and approval workflows within Business Central.

Junior Software Engineer | CSG, Bengaluru

Feb 2022 – Nov 2023

- Developed and deployed full-stack MERN applications with JWT-based authentication and Blockchain API integration for decentralized identity verification in the Vendor Credential Network (VCN).
- Containerized services using Docker, orchestrated deployments on Linux VMs, and configured Nginx reverse proxies for secure routing and high availability.
- Built the firm registration module for the Kaveri 2.0 web app using .NET MVC (backend) and Angular (frontend), integrating RESTful APIs, form validation, RBAC, and SQL Server for data persistence.

Associate Software Engineer | Venerate Solutions, Bengaluru

Aug 2021 – Dec 2021

- Salesforce Developer Training – Platform Developer 1
- Lightning Components, Process Builder and Validations.
