SUMMARY

Experienced Dynamics 365 Business Central / Navision Techno-Functional Consultant with 2.10+ years of experience in new implementations, customizations, reporting, support, and upgrading Microsoft Dynamics NAV to Business Central (Cloud & On-Prem). Possess strong technical and functional expertise in Finance, Sales, Purchase, Warehouse Management, and Inventory modules, with hands-on experience in requirement gathering, system configuration, customizations, UAT support, client communication, and post-go-live support. Skilled in translating business requirements into effective functional solutions while leveraging strong technical capabilities in AL development, integrations, reporting, and cloud migrations.

WORK EXPERIENCE

Evoluzione - Retail | Senior Executive IT (Navision)

Sep 2025 - Present

- Managed end-to-end functional support for Sales, Purchase, Warehouse, Inventory, and Finance processes.
- Coordinated with finance and warehouse teams to streamline posting flows and inventory valuation.
- Supported UAT and go-live activities during Business Central Cloud upgrades.
- Led and supported the successful go-live of Business Central Cloud (2027 version) and provided post go-live support.
- Validated posting setups and ensured accurate financial reporting configurations.
- Worked on automating financial reports using Business Central, Power BI, Python, and Excel to improve reporting accuracy and reduce manual effort.

Inatech Indian Private Limited | Associate Software Engineer

June 2023 - Aug 2025

- Developed and customized tables, pages, reports, and codeunits to enhance ERP functionality and deliver client-specific solutions in NAV and Business Central.
- Supported and optimized integrations using SOAP/ODATA APIs and XML/JSON, resolving 250+ data-sync and system integration issues across multiple clients.
- Set up and configured 25+ NAV/BC cloud environments (NAV 2018, BC20–BC25) for UAT, QA, and Production, ensuring smooth deployments and stable operations.
- Assisted in major cloud migrations (NAV → BC22/24/25), performing data validation, functional testing, environment setup, and providing critical go-live support—including independently managing a Cloud 2025 migration.
- Improved master data accuracy, reduced downtime through proactive monitoring, and collaborated with cross-functional teams to deliver scalable, high-quality technical solutions.

SKILLS

- **Technical Skills:** AL, C/AL, SQL, JSON/XML, SOAP/Odata APIs, OAuth, RDLC, SSRS, Python (Basic), C# (Basic), Power BI, Web Services, Postman, Debugging using VS Code & BC Tools.
 - **Tools & Technologies:** Microsoft Dynamics 365 Business Central (Cloud), Microsoft Dynamics NAV 2018, Microsoft SQL Server, Visual Studio Code, Beyond Compare, Microsoft Excel, Microsoft Word.
 - **Soft Skills:** Strong Communication, Analytical Thinking, Creative Problem-Solving, Team Collaboration, Adaptability.
 - **AI & Productivity Tools:** Claude, ChatGPT, GitHub, Copilot, Gemini, DeepSeek
-

EDUCATION

BE Computer Science

2019-23

Misrimal Navajee Munoth Jain Engineering College | Chennai

SELF-DEVELOPED PROJECT

Invoice Replication Bot | Business Central | (June 2025)

- Developed an automated Invoice Replication Bot within Business Central to streamline test invoice creation.
 - Designed a custom page "Invoice Replication Bot" where entering a production invoice number triggers API calls to fetch all related invoice data into the STG environment.
 - Implemented logic to auto-create missing master records (e.g., customers, items, or dimensions) ensuring data completeness.
 - Simplified internal unit testing and validation processes by replicating real production invoices accurately in the STG setup.
-

PROJECTS

Project #9 (Jan 2026 - Present) | POS & NAV Upgrade to Business Central 25 Cloud

- Leading the upgrade of legacy POS and Microsoft Dynamics NAV systems to Microsoft Dynamics Business Central 2027 Cloud.
- Migrated master and transactional data while ensuring zero data loss and minimal downtime.
- Redesigned key modules to align with cloud capabilities, improving performance and scalability.
- Coordinated with cross-functional teams to ensure smooth rollout across all retail locations.

Project #8 (December 2025-Jan 2026) | Business Central 2027 Cloud Implementation – Construction Client

- Successfully implemented Microsoft Dynamics Business Central 2027 Cloud for a new construction client within a short span of 2 months.
- Led end-to-end client onboarding, including company setup, master data creation, and system configuration.
- Developed and delivered all required customizations based on client-specific business requirements.
- Conducted detailed product demos and walkthrough sessions to ensure client understanding and alignment.
- Provided go-live support and ensured a smooth transition to live operations with minimal issues.

Project #7 (September 2025 - Present) | Automated Financial Reporting | Python 3 & Power BI

- Automated weekly and monthly financial reports for the retail industry using Python 3 and Power BI.
- Integrated data from finance and warehouse management systems to generate consolidated dashboards.
- Developed data pipelines and created advanced visualizations using Power BI and Claude to deliver accurate, interactive, and insightful reports.

Project #6 (February 2024 – June 2024) | Business Central

- Developed and deployed a third-party payment integration using C# and AL, improving transaction efficiency.
- Managed server and environment setup for test and production instances.
- Designed and customized Sales, Credit Memo, Purchase, and Purchase Credit Memo reports as per business requirements.
- Updated master data configurations and performed manual business flow testing for validation.

Project #5 (February 2024 – June 2024) | Business Central

- Implemented a unified data model across 16 clients using Microsoft Dynamics NAV and Business Central (On-Prem & Cloud).
- Exposed business data through ODATA APIs, enabling secure and scalable data access for external systems.
- Built API pipelines to extract BC/NAV data and store it in separate client databases, eliminating the need for direct ERP access.
- Optimized API performance, ensured accurate data mapping, and enabled clients to consume real-time data for reporting, analytics, and third-party integrations.

Project #4 (October 2023 – November 2023) | Business Central

- Configured servers and cloud environments for Business Central v20 deployment.
- Developed Sales Invoice and Credit Memo document templates (English + localized) with RDLC/ Word customization.
- Integrated document layouts with ODATA services to support automated delivery workflows.
- Worked closely with functional teams to validate accuracy, compliance, and output formatting.

Project #3 (August 2023 – October 2023) | Business Central

- Managed environment setup and executed NAV16 → Business Central 22 data migration using configuration packages and API-based data validation.
- Redesigned Sales, Purchase, and Credit Memo reports with enhanced RDLC/ Word layouts and AL code improvements.
- Provided go-live and post-implementation support, resolving migration defects and API inconsistencies.
- Upgraded BC22 → BC25 Cloud, ensuring API compatibility, performance optimization, and seamless integration with external systems.

Project #2 (July 2023 – Present) | Dynamics NAV

- Developed customizations across tables, pages, reports, and codeunits, leveraging ODATA and SOAP APIs for integration requirements.
- Resolved Finance Operations (FO) ↔ NAV integration issues, ensuring error-free data flow using XML/JSON payloads.
- Fixed critical bugs and performance issues, improving platform reliability and reducing downtime.
- Supported third-party add-on integrations, validating data mapping and API endpoints.

Project #1 (July 2023 – Present) | Business Central

- Delivered change requests and functional enhancements across Business Central modules using AL, ODATA APIs, and event-driven extensions.
 - Fixed FO ↔ Business Central integration issues by optimizing the code or API calls and correcting data transformation logic.
 - Created demo and sandbox environments with test data for UAT and internal demonstrations.
 - Supported implementation teams with cloud setup, environment management, and end-to-end functional testing.
-
